

Education

Bath, England	University of Bath	10/2025 - 09/2026
• MSc Computer Science • Dissertation: AI-Assisted Generation and Interactive Exploration of Causal Loop Diagrams from Future Scenario Narratives (Industry Project with DAS) • Relevant Modules: Software Engineering, Software Development, AI and Machine Learning		
Southampton, England	University of Southampton	10/2021 - 06/2024
• BSc (Hons) Computer Science • Dissertation: Artificial Intelligence Techniques for Inheritance of Lost Arts • Relevant Modules: Machine Learning Technologies, Intelligent Systems, Cloud Application Development		

Employment

Software Developer	Aseto - Larnaca, Cyprus	10/2024 - 09/2025
• Designed and implemented agentic AI workflows and RAG pipelines for Aseto's AI Voice Agent, with multi-step reasoning and retrieval using LlamaIndex • Trained and fine-tuned ML models for integration into the conversational AI pipeline, improving response accuracy and task-specific performance • Engineered backend logic automating inbound and outbound communication, integrating the agent with telephony systems and real-time data sources • Designed and maintained modular Python microservices • Built and launched the company's marketing and operations platform using Next.js, ensuring scalability, responsiveness, and high performance across devices • Developed and integrated robust APIs in ASP.NET, enabling communication across services and supporting key features of the AI assistant		
Junior Software Engineer, Intern	Azul Systems - Limassol, Cyprus	07/2023 - 09/2023
• Developed a Java grammar visualiser web application, enabling engineers to navigate and understand complex relationships across hundreds of grammar files • Implemented syntax highlighting, search functionality, and directed acyclic graph visualisations to represent hierarchical grammar dependencies		

Awards

ESBF Competition	University of Bath	05/2026
• Awarded 1st place and £3,000 prize in the Engineers and Scientists in Business Fellowship (ESBF) Innovation Competition as part of the Entrepreneurship module • Collaborated with a team to conceive and pitch 99NOW, a next-generation emergency communication platform proposing to modernise the 999 system with live video, digital reporting, and AI-assisted risk assessment		

Languages and Technologies

- Natural Languages: Greek (Native), English (Fluent)
- Programming Languages: Python, JavaScript, C#, Java, C++
- AI & LLM Engineering: Agentic Workflows, RAG, Prompt Engineering, LLM Integration
- Frameworks: ASP.NET, Next.js, Vite, Express.js, FastAPI, Flask, LlamaIndex
- Tools: Docker, Git, PostgreSQL, Linux, Microsoft Azure
